

# Summary of Categories and Cutoffs for Public Reporting

## Overview

This document reflects the methods used to place clinics into public reporting categories on Q Corp’s consumer website, [www.q-corp.org/compare-your-care](http://www.q-corp.org/compare-your-care), in December 2017. Cutoffs are calculated based on one standard deviation above and below the Oregon clinic average for each measure.

To view clinic-specific scores within a medical group, clinic staff may visit the online secure Reporting Portal. Please visit <http://q-corp.org/portal> for more information on how to enter and use the portal.

**Note:** Only publicly reported measures are included in the list below. Public reporting criteria include 30 or more patients in the measure, three or more primary care providers in the clinic, and the medical group has been included in at least one round of private reports.

For questions about category cutoffs or public reporting, please call us at (503) 241-3571 x118 or email: [QCorpinfo@healthinsight.org](mailto:QCorpinfo@healthinsight.org).

## Legend

(This will appear on the public website)

**Better** Scored well above (**better than**) the average state-wide score

**Average** Scored in the middle

**Below** Scored well below (**worse than**) the average state-wide score

(See details on data and scoring)
